

Blue:Q The solution for 0,3W/m²

The simple plug & play solution by Original Hanau is called Blue:Q. These high pressure lamps will bring the most common sunbeds quickly and easy in the range of 0,3W/m² - according to the LVD limits

Der costly replacement of the filter ist not necessary anymore. You only have to buy the Blue:Q lamps by Original Hanau.

The special high-pressure lamps are made from innovative blue quartz glass, which differs in the transmission of conventional quartz glass. Blue:Q quartz is only transparent to longer wavelength radiation.

Short wavelength ranges of the UV spectrum are restrained This reduces the risk of sunburn directly to the source.

With Original Hanau you are on the safe side. DEKRA has tested and certified the complete process of changeover by Original Hanau to the requirements of LVD.

Original Hanau's „Brief & Siegel“ confirms that your tanning bed can be operated in accordance to the LVD regulations. You can be sure to comply within the limit.

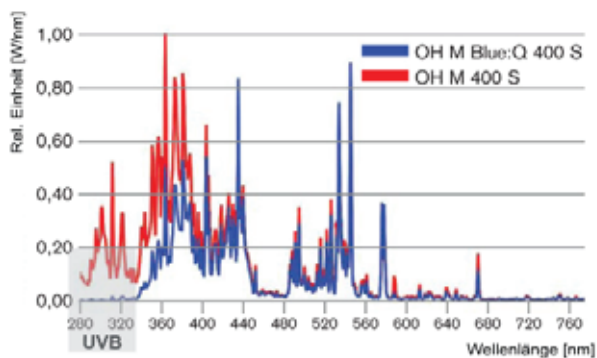

We will issue certificates to each sunbed indicating the corresponding built-in tanning tube and high pressure lamps.

Blue:Q gentle tanning

The LVD limits the maximum irradiance in sunbeds to $0,3\text{W/m}^2$. As part of this new regulation, we have the Blue:Q, as an innovative high pressure lamp, in our programm.

Undesirable radiation is in the UVB wavelength range between 280nm und 315nm:

Our Blue:Q lamp regulates the radiation, that coul cause the risk of sunburn, right at the source. In addition, Blue:Q regulates the radiation in the range between 315nm and 380nm to minimize skin aging risks.

So Blue:Q complies to the LVD regulations and also provides a good and gentle tanning.

Blue:Q 2.0 products

the profisolution: even closer to $0,3\text{W/m}^2$
